

<i>Benefits of MeRIT</i>	<i>Details of benefits</i>	<i>Beneficiaries</i>
Transparency	MeRIT follows and facilitates Open Science best practices by detailed reporting of not only methodological details, but also how many people contributed to each study element.	<i>Researchers Institutions Funders Journals</i>
Granularity	MeRIT captures details of specific contributions, rather than using broad contributorship categories. It can aid research performance assessment and recruitment, as well as authorship disputes. It could deter “gift authorship”.	<i>Researchers Institutions Funders Journals</i>
Accountability	MeRIT prevents dilution of responsibility by being specific about who did what in a study. It may reduce negative implications for the whole team and making investigations easier if any inconsistencies or malpractices are suspected.	<i>Researchers Institutions Funders Journals</i>
Adoptability	MeRIT is easy to implement and flexible – the level of reporting detail can be adjusted to the needs of a specific study or output type. Also, how individuals are credited is customisable, considering non-authors and consortia.	<i>Researchers Institutions Funders Journals</i>
Collaboration	MeRIT contributes to building fairer and stronger collaborations by acknowledging contributions. It can foster healthy discussions on contributorship expectations in collaborative projects.	<i>Researchers Institutions Funders Journals</i>
Communication	MeRIT makes it easier to identify the best person to contact about specific study details and also for requesting expert opinions (especially if contact details or ORCID are provided for each contributor).	<i>Researchers Institutions Funders Journals</i>
